

Support Ticket Summary using COMPLETE

Dataset

SUPPORT_TICKETS(ticket_id, priority, description)

Objective

1 Generate concise ticket summaries using CORTEX.COMPLETE().

Tasks

1. Read description from the table.
2. Build a prompt asking the model to:
 - Summarize the issue in **1–2 sentences**
 - Avoid adding assumptions
3. Call SNOWFLAKE.CORTEX.COMPLETE().
4. Output:
 - ticket_id
 - Original description
 - Generated summary
5. Validate summaries for clarity and accuracy.

2 Priority-Aware Summary (Conditional Prompting)

Objective

Change summary tone based on ticket priority.

Tasks

1. If priority = 'High', instruct the model to:
 - Emphasize urgency and business impact
2. If priority ≠ 'High', instruct:
 - Neutral factual summary
3. Generate summaries using COMPLETE().

4. Compare summaries for **High vs Low** priority tickets.

Executive vs Agent Summary Comparison

Objective

Generate summaries for different audiences.

Tasks

1. Create two prompts:
 - Executive summary (business impact, short)
 - Support agent summary (technical detail)
2. Generate both summaries using COMPLETE().
3. Output both summaries side-by-side for the same ticket.
4. Compare usefulness for each audience.
